

Pre- Entrega 2

Creación de Máquina Virtual en VirtualBox

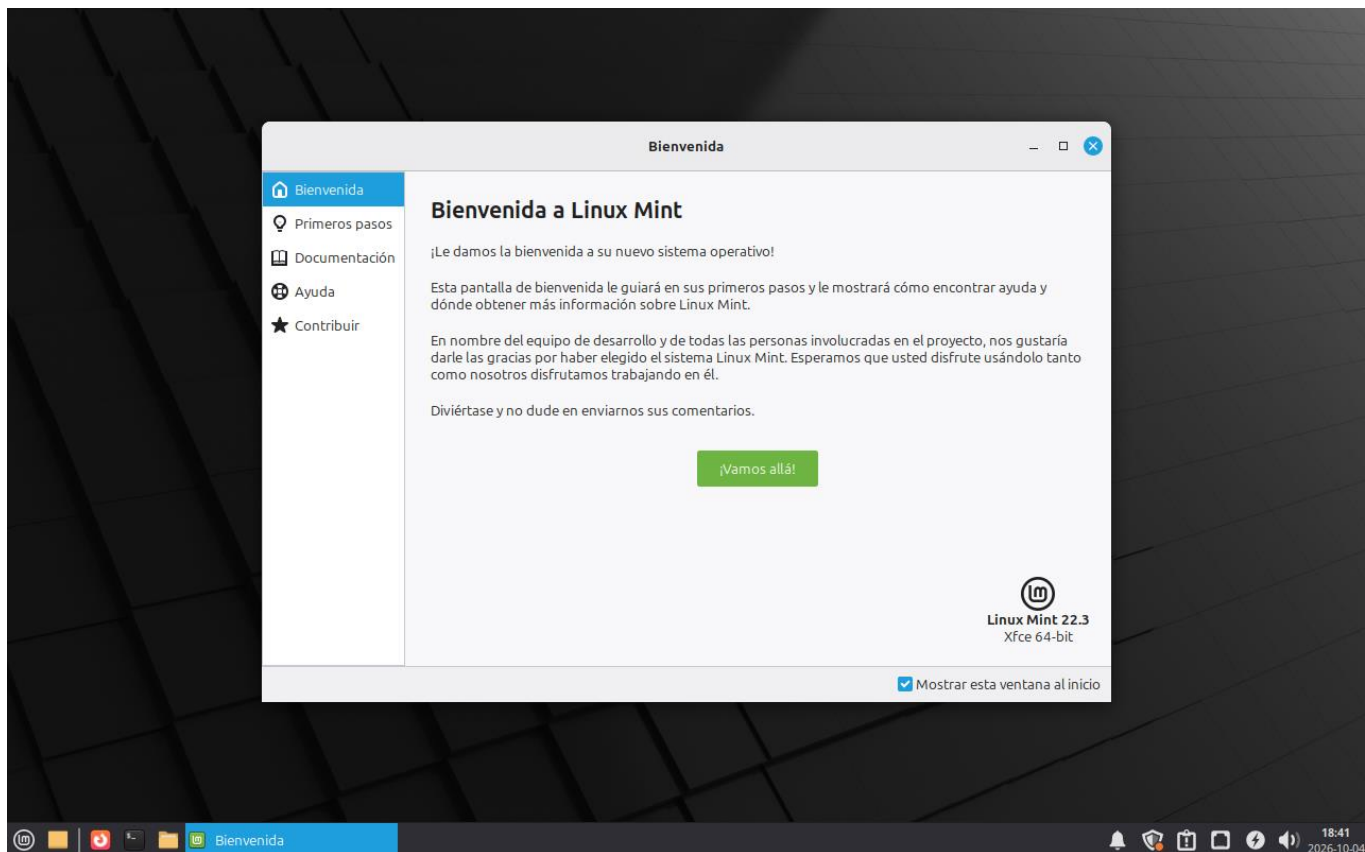

- Creación de VM , se eligió Linux Mint

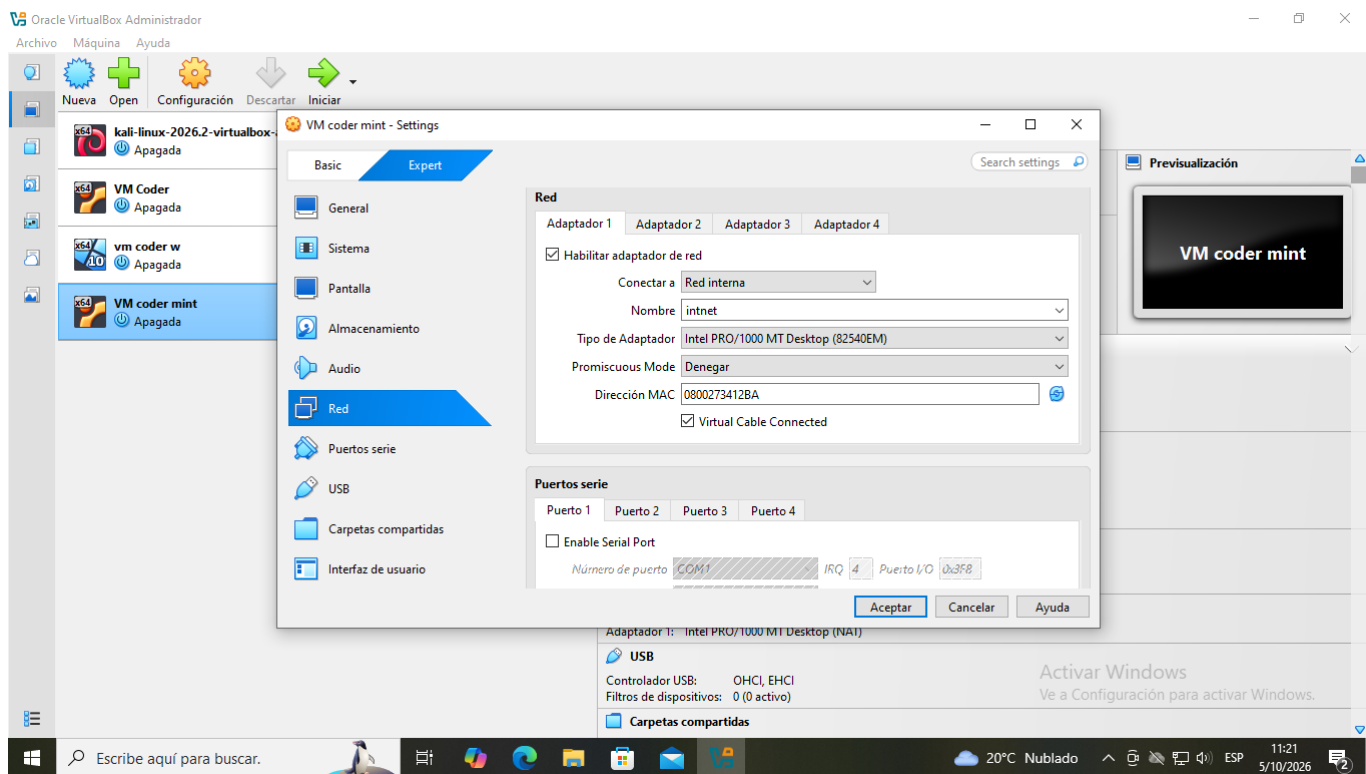

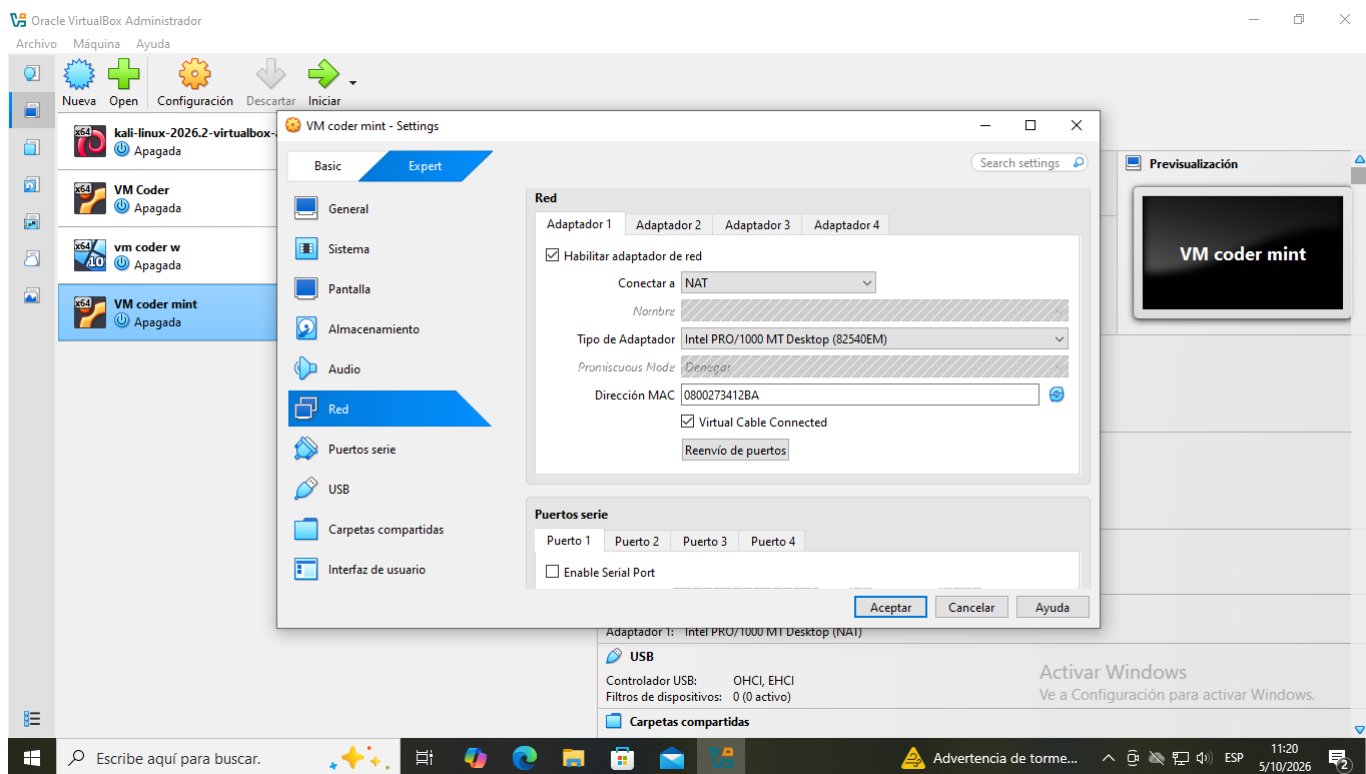

- Se asignaron los recursos

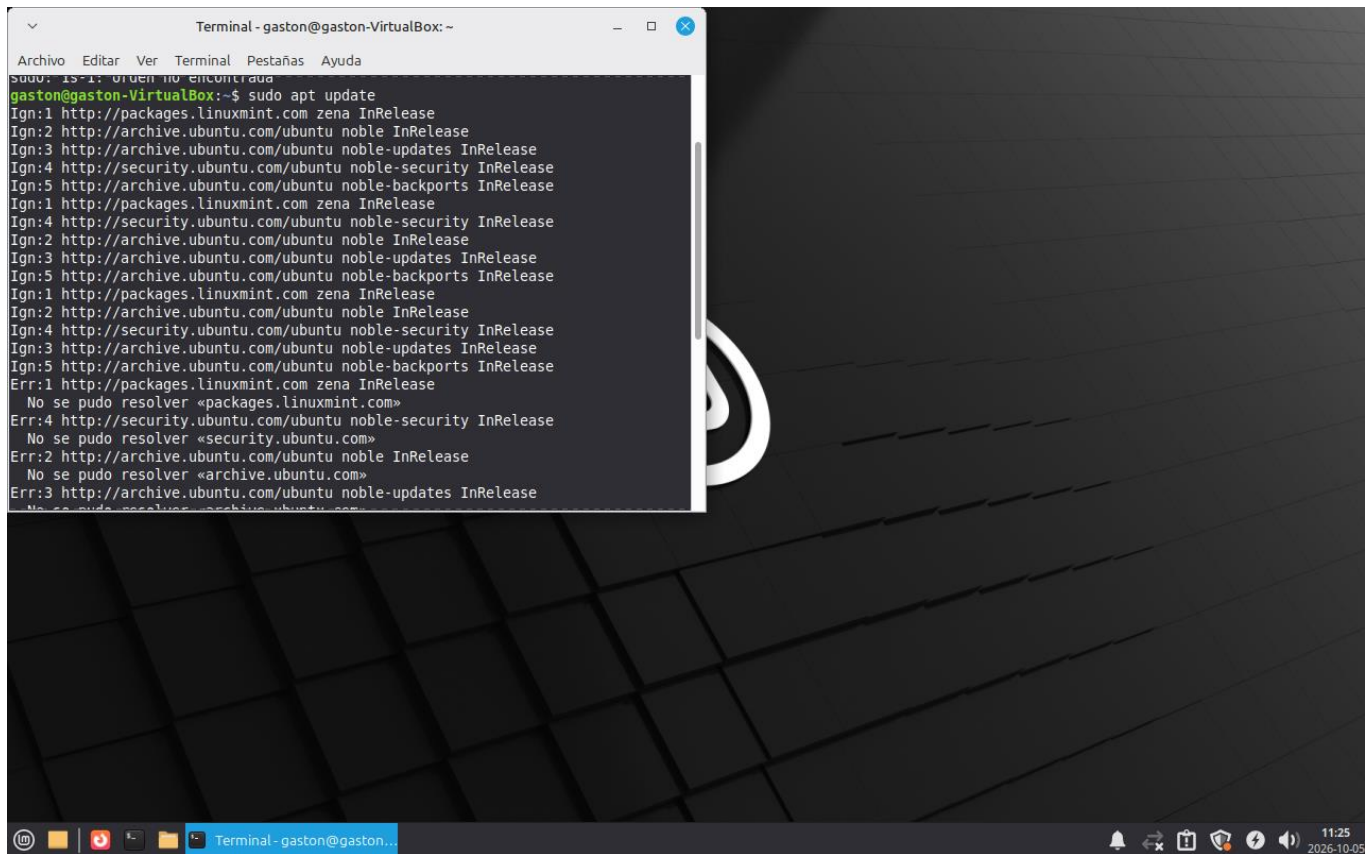

- Se instaló con éxito el SO del VM
- Terminada la instalación del VM, se procede a cambiar la configuración de NAT a RED INTERNA

- Se elije el modo Red Interna para que el VM no tenga acceso a internet ni a la computadora Host. EL modo Red Interna es el más seguro para análisis de malware.

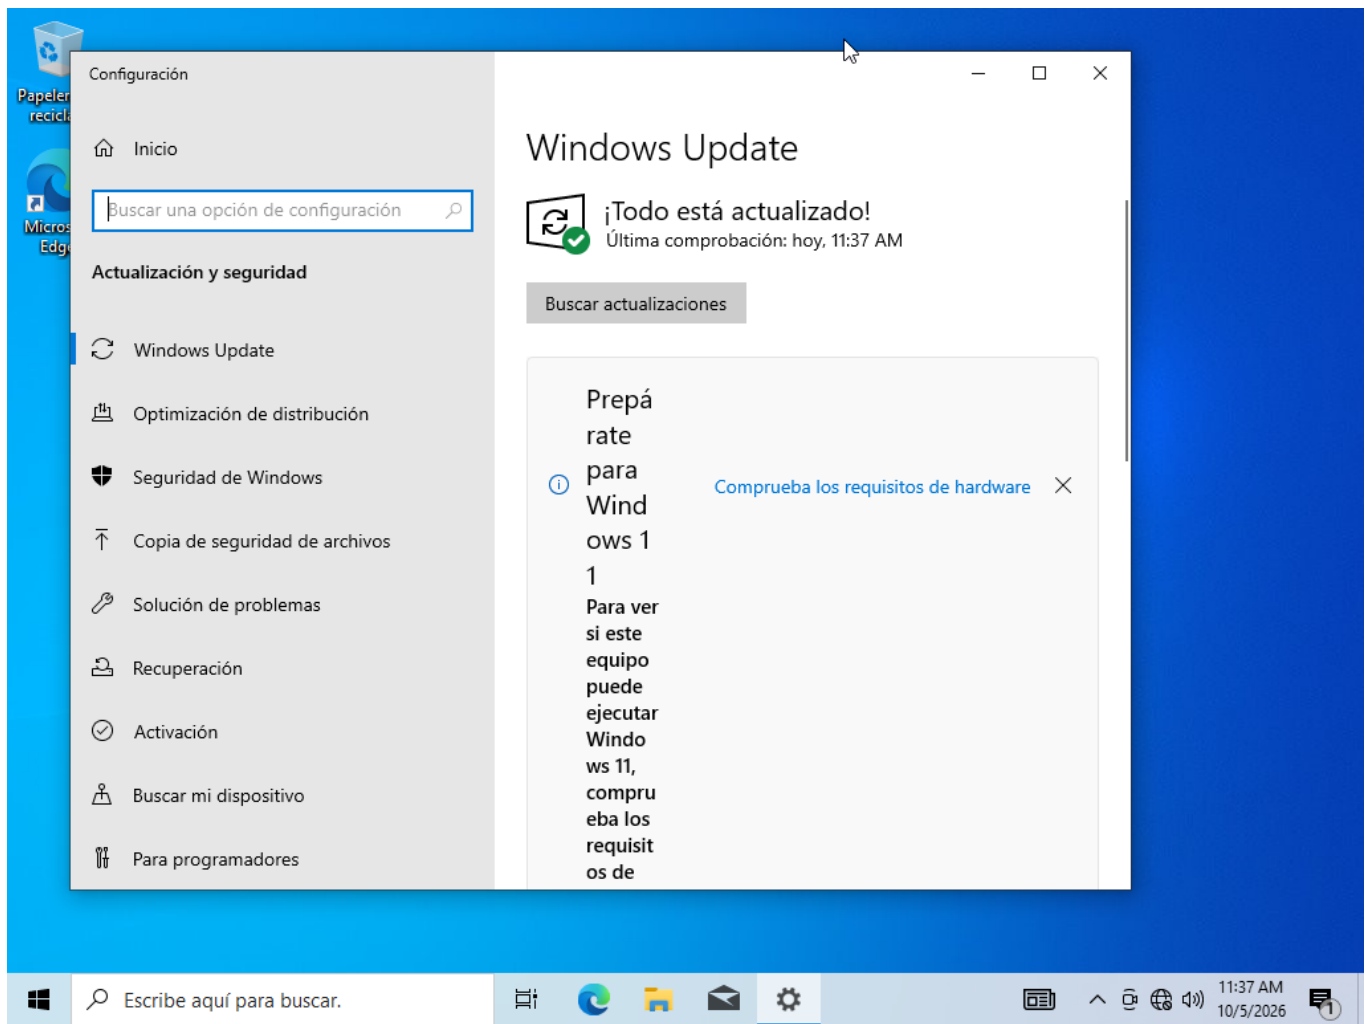

Hardening del VM

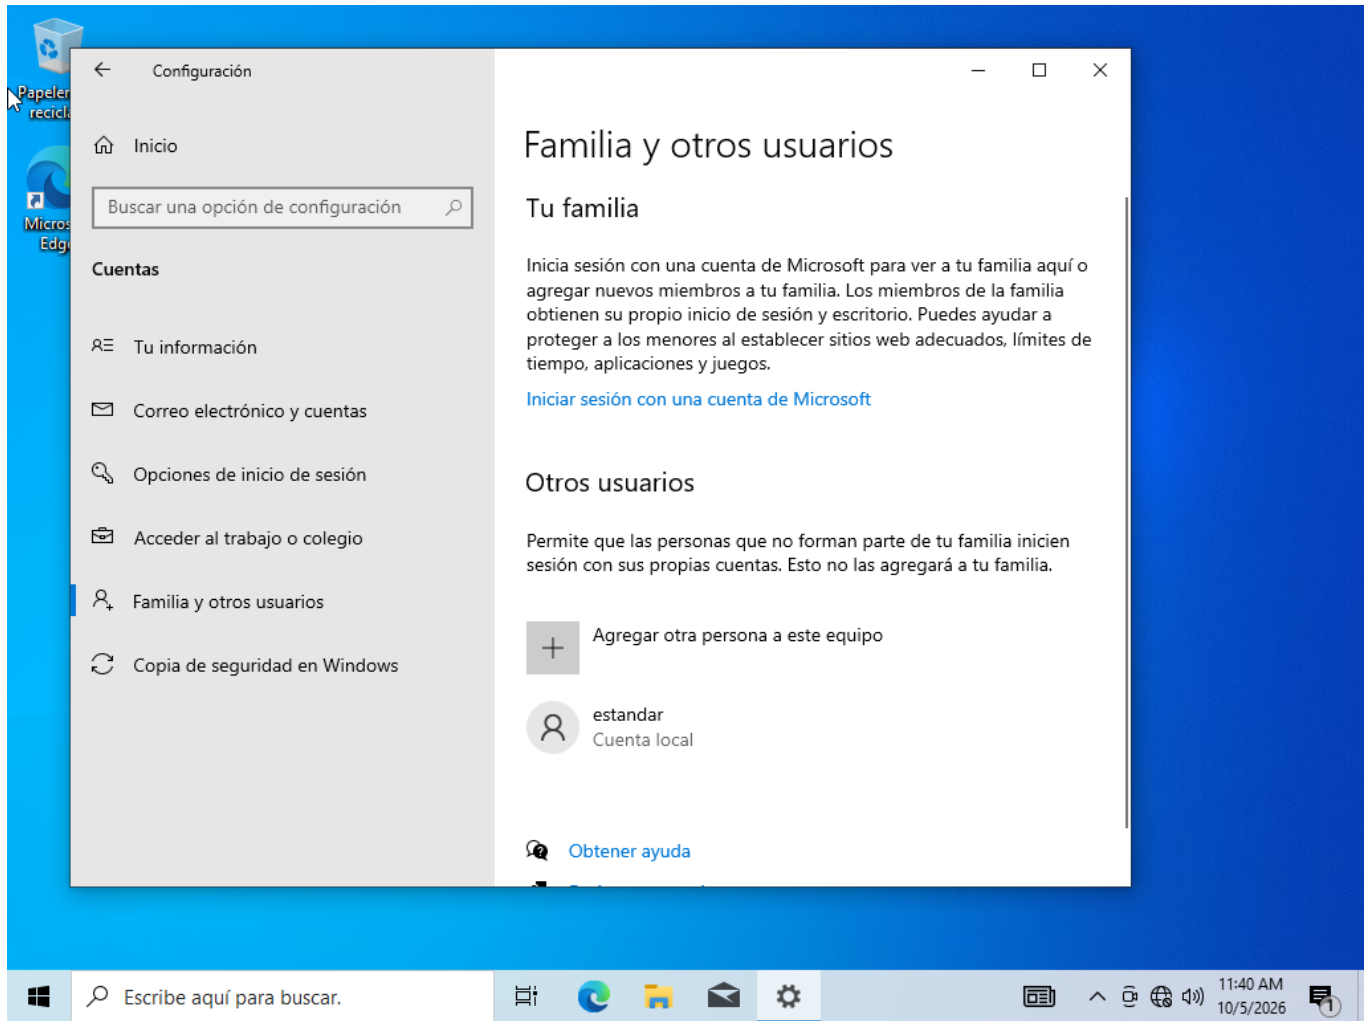

A terminal window titled "Terminal - gaston@gaston-VirtualBox: ~" is open over a Linux desktop background. The terminal shows the command `sudo apt update` being executed. The output consists of several "Ign" (ignore) messages for various repositories and three "Err" (error) messages. The errors indicate that the system cannot resolve the package lists from the mirrors: `No se pudo resolver «packages.linuxmint.com»`, `No se pudo resolver «security.ubuntu.com»`, and `No se pudo resolver «archive.ubuntu.com»`. The desktop background is dark with a grid pattern and a large white number '2'.

```

- Actualizaciones de paquetes Linux

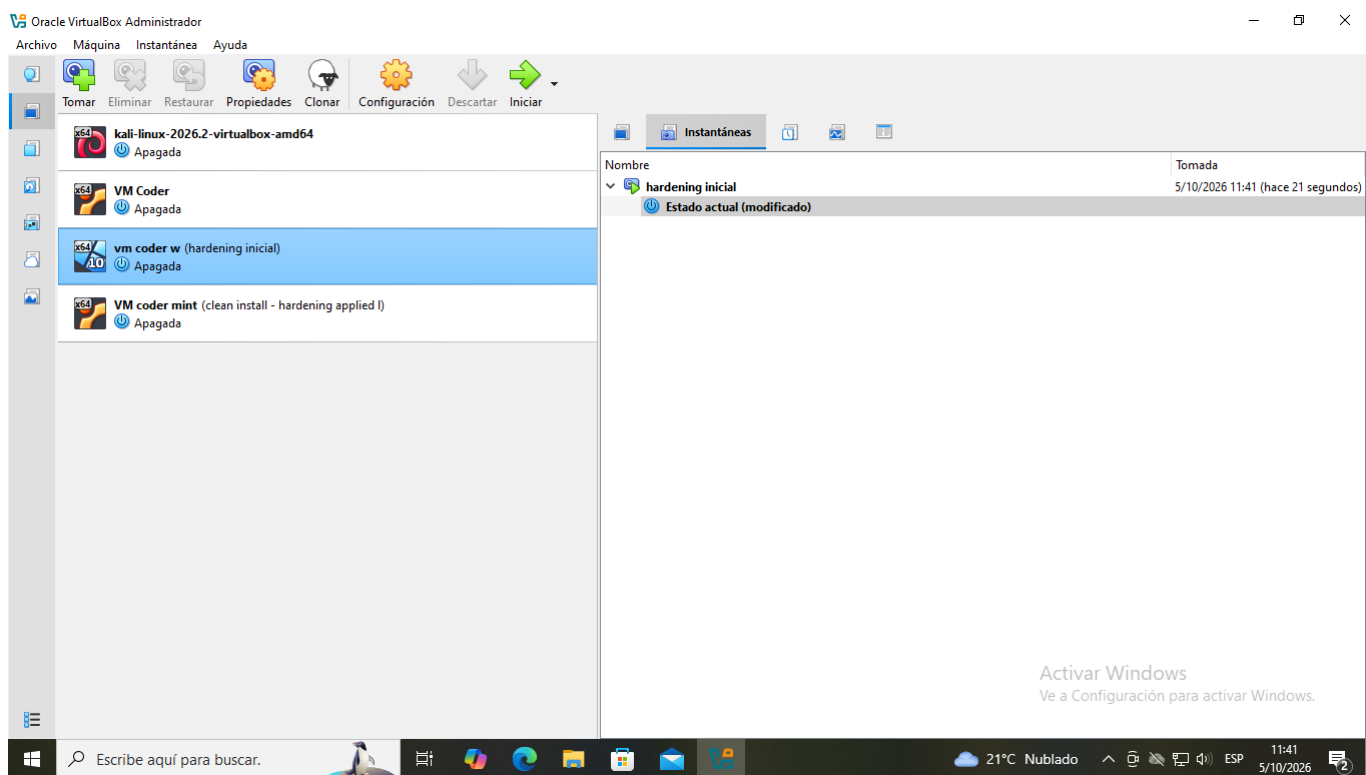

- El OS Windows presenta Windows Update al día

- Se creó en Windows un usuario Estándar para su uso en las prácticas

- Se crearon Snapshot iniciales tanto en OS Windows como en OS Linux
